

**CyBree**

**Next Generation Cloud**

[www.cybree.com](http://www.cybree.com)

# What is **Cybree**

Cybree provides **Powerful Cloud Instances** with top performance and competitive price to fulfill your business needs for

- **Quick** Deployment
- **Easy** Development
- **Wide** Global Coverage

# User-Friendly Console

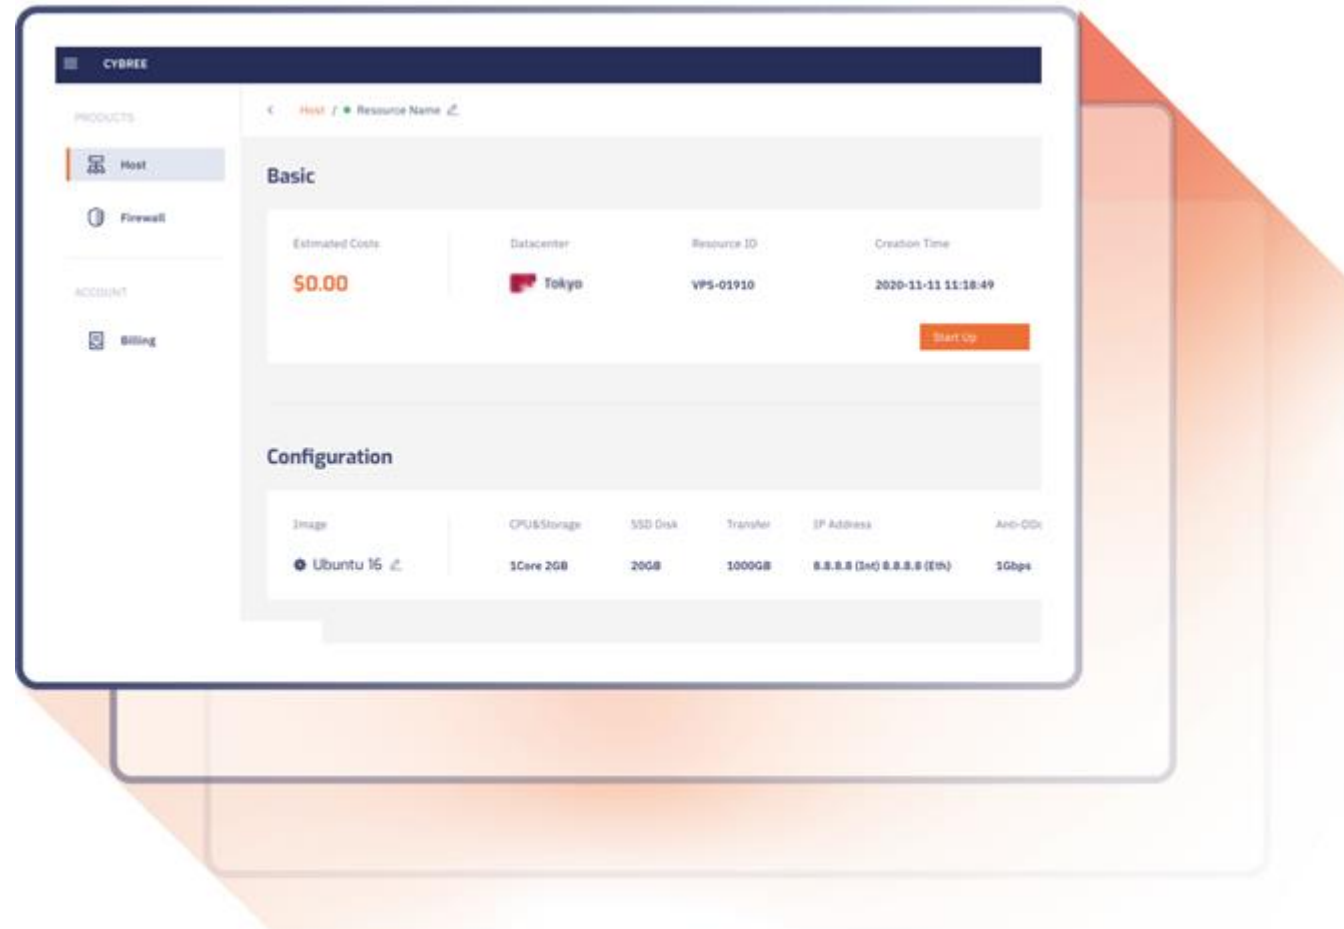

Launch Instances with **Simple Clicks**

**Easy to Manage** Cloud Resources

Predicable Price & **Clear Billing**

# Global Coverage & More Coming

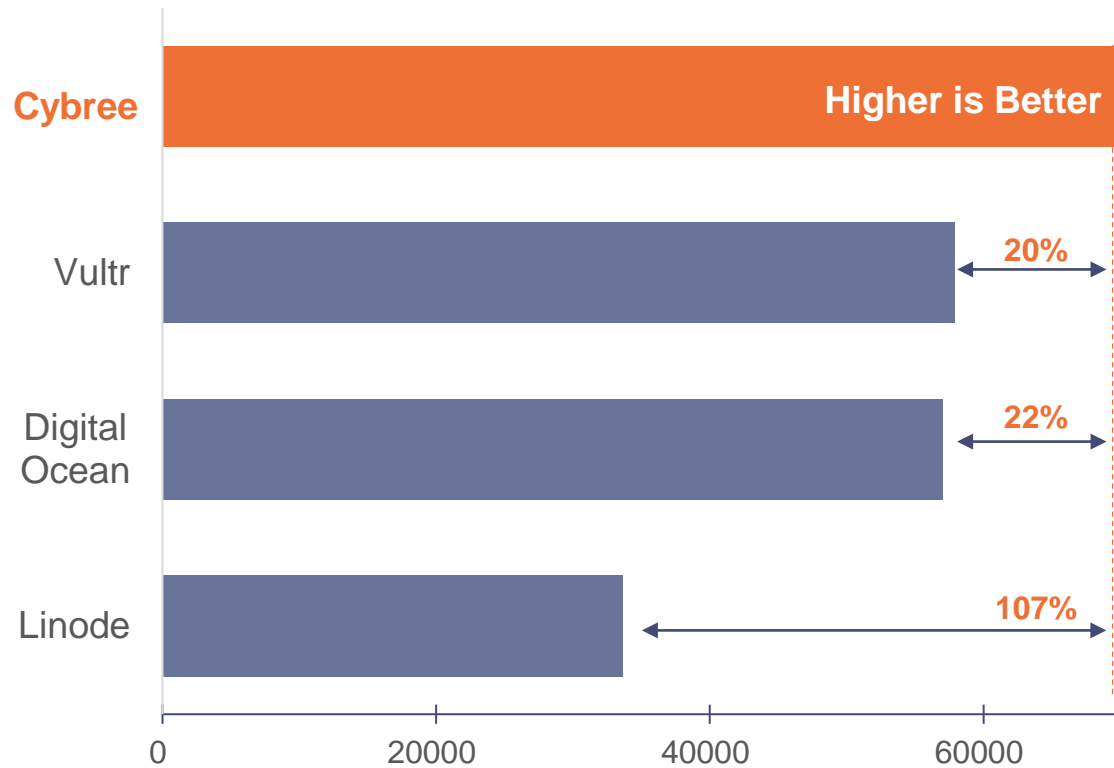

# Simple & Powerful

---	---	---	---

# Compute Performance

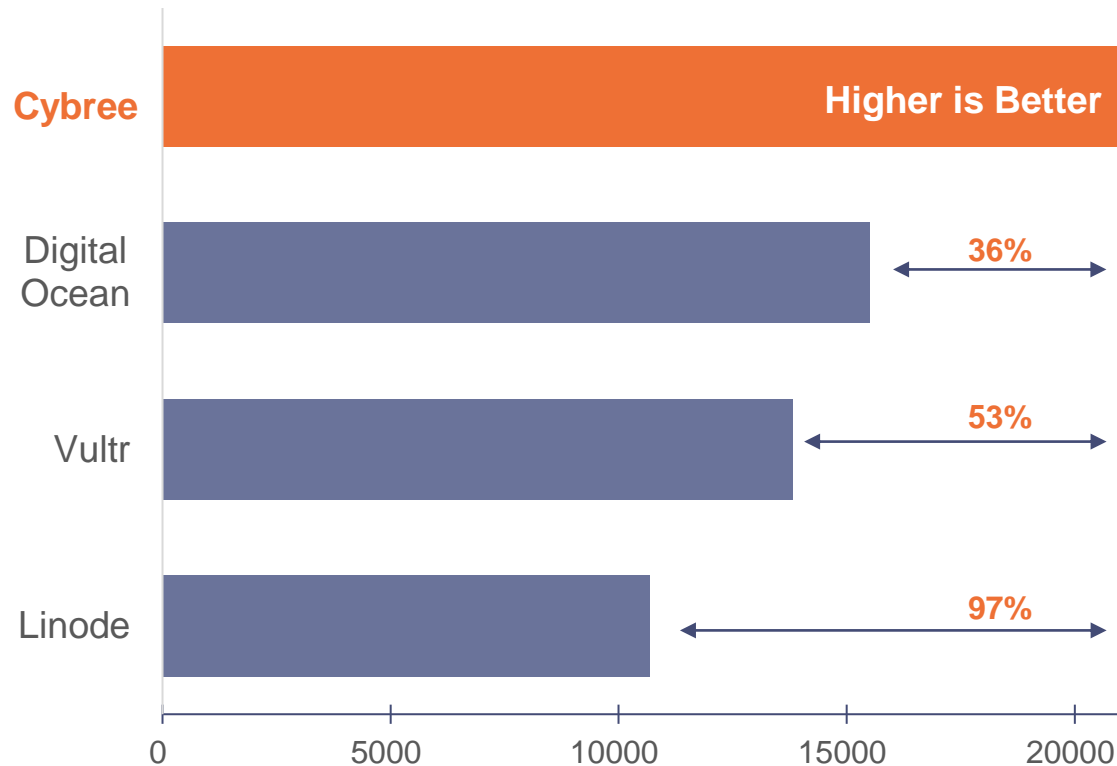

**Coremark-4c CPU Score**  
(CoreMark/MHz)

- **CoreMark** is a widely adopted CPU performance benchmark, based on the single thread performance per clock frequency
- All tests are performed with **4C-8G-160G** instance configuration

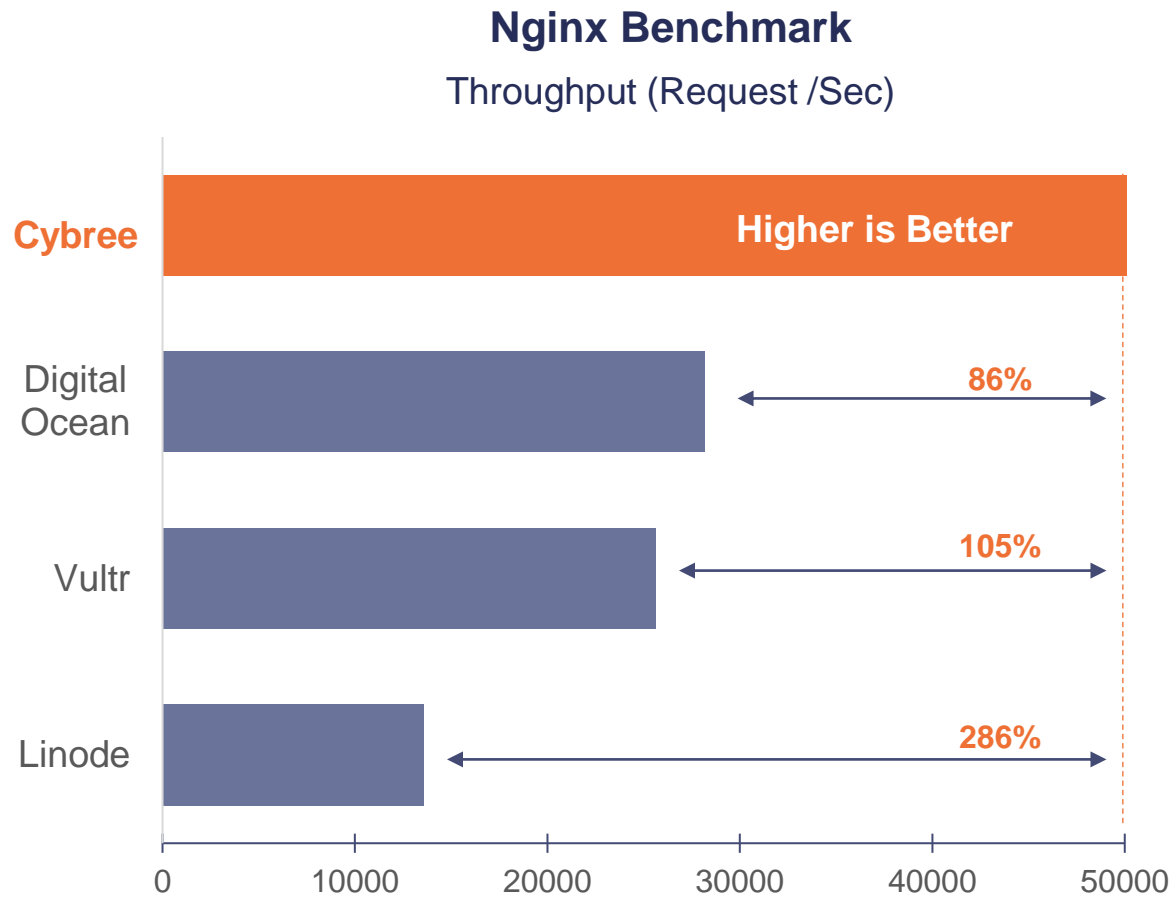

# Database Performance

**TPCC MYSQL Benchmark**  
(Throughput)

- **TPCC** is designed for benchmarking on-line transaction processing systems (OLTP system). It stress tests MySQL database to simulates the real life situation
- All tests are performed with **4C-8G-160G** instance configuration

# Web Server Performance

- **NGINX** is widely adopted high performance web server and load balancer. This test stress Nginx server with large requests to simulates the real life situation of a highly active website and calculate the throughput
- All tests are performed with **4C-8G-160G** instance configuration

# What Our **Customers** Have Done

# What Our **Customers** Have Done

## Nginx Cluster

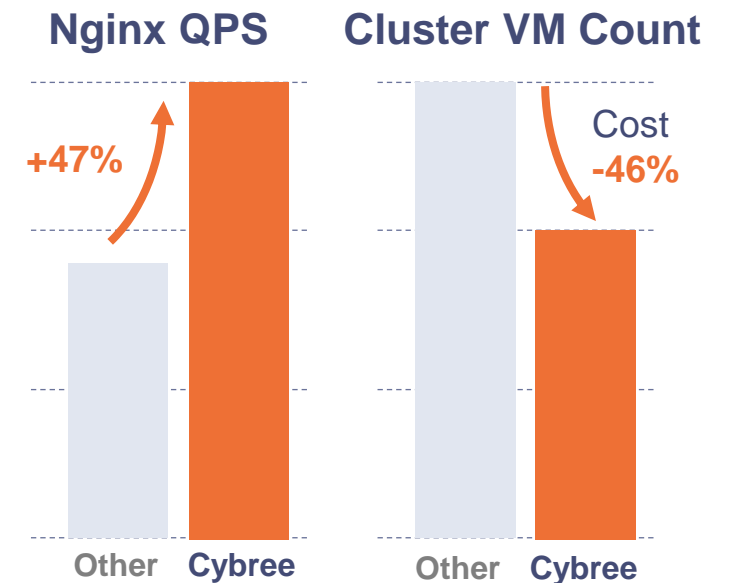

### Scenario:

A **DSP (Demand-Side Platform)** company have high concurrency requirement for their network clusters

They chose to use Cybree to build an Nginx cluster to serve as an **API gateway** to provide services to their end customers

With Cybree VM high network performance, DSP can significant reduce their original Nginx cluster size and **Reduce Cost**

# What Our Customers Have Done

TiDB

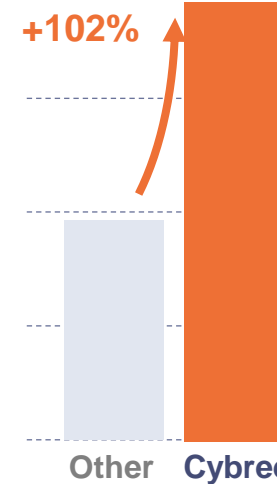

## Scenario:

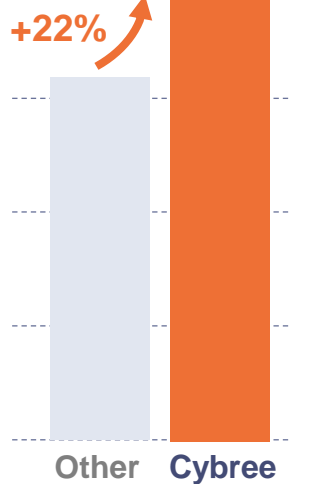

PingCAP's TiDB is a popular open source **distributed relational database**, designed for the high-concurrency real-time writing/query/statistical analysis

Many customer choose Cybree VM with **RSSD Disk** to satisfy the **High IO Performance** requirement of TiDB

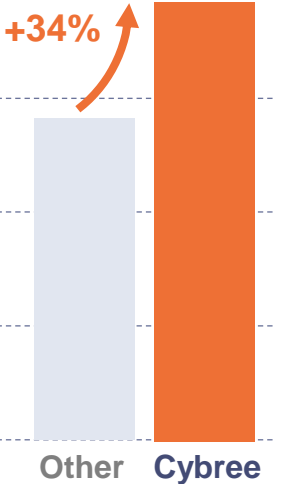

TiDB (QPS)

MySQL (QPS)

Redis (QPS)

# What Our **Customers** Have Done

## ClickHouse

### Scenario:

A **Mobile Game VoIP/Instant Messaging** company needs to collect event tracking data into a Big Data cluster for analysis

The company decided to build ClickHouse database on Cybree VM for **Big Data Cluster**. Compared with the other cloud, the daily increment can now reached up to 800M records

<b>ElasticSearch</b> (Search Latency -30%)	<b>Spark</b> (Training Length -61%)	
<b>Hadoop HDFS</b> (Throughput 1.8x)		
<b>Kafka</b> (Throughput 2x)	<b>HBase</b> (Throughput 1.3x)	<b>ClickHouse</b> (Throughput 1.5x)
